About me

Software Engineering student specializing in Full-Stack development, Secure Software Design, and Cloud-Native Applications. Experienced in delivering end-to-end software solutions, from software architecture and relational database design to implementation, technical documentation, and cloud deployment. I integrate security-by-design principles into every stage of the development lifecycle, applying authentication, authorization, encryption, and secure cloud practices. Complementing this background, I have developed a strong foundation in Cybersecurity through professional training and the implementation of secure software solutions.

Education

B.Sc. in Information and Communication Technologies Engineering (ICT Engineering)

Instituto Tecnológico de Toluca | 2024 – Present

Professional Certifications

Google Cybersecurity Professional Certificate

Coursera | 2025

Project Management & Agile Fundamentals

Santander Open Academy | 2025

Cisco Networking Academy Certifications | 2025

- CCNA: Introduction to Networks
- Introduction to Cybersecurity
- Modern AI
- Digital Awareness

Basic Python Programming — Tecnológico Nacional de México (MOOC)

Web Development — Google Actívate

Technical Skills

- Programming Languages: JavaScript • TypeScript • SQL • Python • Java • C#.
- Frontend React • Vite • HTML5 • CSS3.
- Backend: Node.js • Express • REST APIs.
- Cloud Plataforms: OCI • Render • Vercel.
- Databases: Oracle SQL • MySQL • PostgreSQL • Firebase.
- Software Engineering: Software Architecture • MVC • UML • SDLC Agile.
- Cybersecurity: OWASP • NIST • Authentication • Authorization • Encryption • Linux • SIEM Fundamentals • Splunk Fundamentals.
- Tools: Git • GitHub • Docker • Postman • Thunder Client • VS Code • Docker.
- Languages: Spanish, English, French, and German.

Selected Engineering Projects

Independently managed the complete Software Development Lifecycle (SDLC) for all listed applications, including requirements analysis, software architecture, database design, technical documentation, full-stack development, testing, cloud deployment, and maintenance. Every project incorporates secure authentication, encrypted credential management, role-based authorization, and secure cloud deployment following secure software development principles.

Gutten Kleid — Full-Stack E-commerce Platform

Progressive Web Application (PWA) that automates retail operations through secure customer management, online payments, inventory administration, and order tracking. Key features:

- Complete SDLC ownership, from requirements analysis to cloud deployment.
- Role-Based Access Control (RBAC) for customers and administrators.
- Secure Stripe payment integration.
- Oracle Autonomous Database deployed on OCI using Mutual TLS (mTLS).
- Cloudinary integration for media management.
- Distributed deployment across Vercel, Render, and Oracle Cloud Infrastructure.

Amar-Te — Restaurant Operations & Business Intelligence Platform

Cloud-native restaurant operations platform integrating Point of Sale (POS), Business Intelligence dashboards, real-time kitchen communication, and employee management. Key features:

- Complete SDLC ownership.
- Business Intelligence dashboards with KPI analysis and PDF reporting.
- Real-time notifications using WebSockets.
- Configurable geofencing for employee authentication.
- QR receipt generation and WhatsApp delivery.
- Secure deployment using Oracle Cloud Infrastructure and Mutual TLS.

WhatsApp X — Enterprise Communication Platform

Designed and developed a secure communication platform that centralizes business conversations through encrypted messaging, multimedia sharing, and multilingual communication. Key features:

- Complete SDLC ownership.
- DeepL API integration for multilingual message translation.
- Polling-based message synchronization.
- Modular MVC-inspired backend architecture.
- Secure authentication and encrypted communication.
- Distributed cloud deployment using Oracle Cloud Infrastructure.
